NOVEMBER 1968

The disposable personal income per capita of farm people this year probably will record high, due to an expected gain in farm income and increased earnings from farm sources. Compared to the average disposable income of nonfarm people, the average income of farm people will likely be about 73 percent in 1968, about the same as in 1967, but well above the ratio in this decade.

## FARM INCOME: THE 1968 SITUATION AND EARLY 1969 PROSPECTS

### **Summary**

Realized net farm income improved substantially in recent months, and for 1968 is expected to be around \$15 billion, compared with \$14.2 billion in 1967. Higher average farm prices and a larger volume of farm marketings are improving the farm income picture this year. Strong consumer demand in 1968 strengthened farm prices for livestock products and fruits and vegetables. Despite very heavy marketings of grains, liberalized reseal programs helped support sagging prices. Higher price support for milk also helped to bolster cash receipts in 1968.

Larger supplies of livestock and poultry and larger carryover stocks from bumper grain and oilseed crops now being

harvested are in prospect for early 1969. In addition, domestic demand may reflect some slower growth in consumers' spendable income. Thus, farm prices in early 1969 may be under pressure of larger supplies and an easing demand situation. However, some increase in cash receipts is expected as much of the increase in output is from supported crops. Government payments likely will be larger next year. The persistent uptrend in production expenses will continue, but may moderate a little.

Realized net farm income in the early months of 1969 will likely show little change from year-earlier levels, but may decline from current levels.

As announced, The National Agricultural Outlook Conference for 1969 is scheduled for February 17-19, 1969. In recent years the Outlook Conference has been held in November of the preceding year.

Coinciding with this shift in the date of the Outlook Conference, the farm income outlook for 1969 usually carried in the November Farm Income Situation will appear in the February 1969 issue.

## Cash receipts, January-September 1968

Through September of this year cash receipts from farm marketings were estimated at \$29.7 billion, up about \$550 million from January-September 1967. In addition, direct Government payments to farmers during January-September 1968 were reported at \$3.0 billion, up about \$525 million from the same period in 1967.

Receipts from livestock and product marketings were \$18.6 billion during the first three quarters of this year, more than \$500 million above the corresponding period of 1967. Cattle and calf receipts accounted for a gain of over \$400 million; prices were up over 4 percent despite an increase in marketings. Receipts from hogs declined slightly, as prices below a year earlier more than offset an increase in slaughter.

Milk prices paid by plants and dealers through September were up 4 percent over 1967 levels resulting in an increase in producer receipts of over \$100 million; the volume of milk shipped to market was down slightly. Poultry and egg receipts for January-September 1968 were up slightly from a year earlier. Broiler prices were up about 6 percent, while marketings were unchanged from a year earlier. Egg prices and receipts have improved since early summer raising the January-September average price 2 percent above a year earlier. Turkey marketings and prices through September were lower, leading to a substantial drop in receipts; however, prices have been edging upward and in the main marketing season likely will be higher than a year earlier.

Crop receipts totaled \$11.1 billion through September 1968, about the same as in the first 9 months of 1967. Food and feed grain receipts were down as generally lower prices more than offset increased marketings from bumper crops. Cotton prices were well above a year earlier due to a sharply reduced supply from the very small 1967 crop. Tobacco receipts were off from a year earlier, as improved prices were not enough to offset a reduced volume of marketings. Soybean prices

averaged below 1967 levels resulting in a decline in receipts.

Receipts from marketings of vegetables were up almost \$100 million from a year earlier; truck crops receipts rose nearly 10 percent due to record high prices earlier in the year. Receipts from marketings of fruits and nuts were well above the year earlier; citrus prices were sharply higher due to reduced supplies from the 1967-68 citrus crop.

## Income and expenses for 1968

Most of the 1968 gain over last year in cash receipts from farm marketings is expected to occur in the last quarter. A much larger cotton crop will result in a substantial gain in marketing receipts. Meat animal marketings are expected to continue larger than in 1967 with prices remaining strong. A large volume of crop marketings will help maintain receipts even though some major row-crop prices will be lower. Poultry and egg prices will average above late 1967 levels, and wholesale milk prices will continue higher. Potato prices are currently running well above year-ago levels, pointing to a boost in growers' cash income in the last quarter of this year.

Direct Government payments this year are expected to be up about one-eighth from the \$3,079 million paid out in 1967. The increase this year stems from much larger payments under the Feed Grain Program. Some offset to the total increase in payments will come from reduced payments under the 1968 Cotton Program.

The increase expected this year in cash receipts from marketings and Government payments may be as much as \$2 billion. This would boost realized gross farm income to a record level of around \$51 billion.

However, farm production expenses are also rising, and may increase this year by about \$1 1/4 billion to a level of around \$36 billion. Prices paid by farmers for production items, interest, taxes, and farm wage rates will be about 3 percent higher than in 1967. Almost all production items, with the exception of feed and fer-

tilizer, are higher in price than a year earlier. Overhead costs--depreciation, mortgage interest, and real estate taxes--will be up substantially in 1968. In addition, farmers are buying more live-stock, fertilizer, and some other production goods. Farm wage rates through September rose more than the number of hired farm hands declined.

With gross farm income rising faster this year than production expenses, realized net farm income is likely to increase to around \$15 billion, compared with \$14.2 in 1967. This level of realized net income now in sight for 1968 would yield an average income per farm of around

\$4,900, up about \$375 per farm from 1967, and exceeded only by the \$5,000 average for 1966.

The disposable personal income of farm people this year probably will be record high due to the expected gain in farm income plus increased earnings from nonfarm sources. Thus, the 1968 level of per capita disposable income of the farm population is likely to be about double the \$1,100 estimated for 1960, and would be about 73 percent of the average income of nonfarm people. This share is about the same percentage as in 1967, but well above the 55 percent of 1960.
